## RESEARCH INTERESTS

PDEs of fluids. My current research focuses on the free-boundary problems in inviscid fluids (mostly compressible, with or without surface tension), e.g. water waves, relativistic fluids, MHD, elastodynamics, etc, and also the related problems about the nonlinear stability of vortex sheets/contact discontinuities. I'm also interested in the formation/stability/evolution of various kinds of singularities, and the long time behaviours (or stability of certain equilibria) of compressible fluids.
