Evans Chapter 5 习题 $(U\subset\mathbb{R}^n$ 开, $\partial U\in C^\infty)$ ($B(x,r)$ 表示闭球)

[5.1] 设 $k\in\mathbb{Z}_+$, $0<r\le 1$. 证明: $C^{k,r}(\bar U)$ 是 Banach 空间.

证明: Step 1: 验证 $\|\cdot\|_{C^{k,r}(\bar U)}$ 是范数. $\|u\|_{C^{k,r}(\bar U)}=\sum_{|\alpha|\le k}\|D^\alpha u\|_{C(\bar U)}+\sum_{|\alpha|=k}[D^\alpha u]_{C^{0,r}(\bar U)}$

① 正定性:

$\|u\|_{C^{k,r}(\bar U)}\ge 0$ 为显然.

若 $\|u\|_{C^{k,r}(\bar U)}=0$ 则 $\|D^\alpha u\|_{C(\bar U)}=0\quad\forall|\alpha|\le k$

$\Rightarrow \|u\|_{C(\bar U)}=0\ \Rightarrow u=0$ in $\bar U$.

② 齐次性. $\|\lambda u\|_{C^{k,r}(\bar U)}=|\lambda|\cdot\|u\|_{C^{k,r}(\bar U)}\quad\forall\lambda\in\mathbb{C}$ 显然

③ 三角不等式. 设 $u,v\in C^{k,r}(\bar U)$

$$\|u+v\|_{C^{k,r}(\bar U)}=\sum_{|\alpha|\le k}\|D^\alpha(u+v)\|_{C(\bar U)}+\sum_{|\alpha|=k}[D^\alpha(u+v)]_{C^{0,r}(\bar U)}$$

$$\overset{\|\cdot\|_{C(\bar U)}\text{是范数}}{\le}\sum_{|\alpha|\le k}\left(\|D^\alpha u\|_{C(\bar U)}+\|D^\alpha v\|_{C(\bar U)}\right)+\sum_{|\alpha|=k}\sup_{\substack{x\ne y\\x,y\in\bar U}}\frac{|u(x)+v(x)-u(y)-v(y)|}{|x-y|^r}$$

$$\le\sum_{|\alpha|\le k}\|D^\alpha u\|_{C(\bar U)}+\sum_{|\alpha|\le k}\|D^\alpha v\|_{C(\bar U)}+\sum_{|\alpha|=k}\sup_{\substack{x\ne y\\x,y\in\bar U}}\frac{|u(x)-u(y)|}{|x-y|^r}+\sum_{|\alpha|=k}\sup_{\substack{x\ne y\\x,y\in\bar U}}\frac{|v(x)-v(y)|}{|x-y|^r}$$

$$=\|u\|_{C^{k,r}(\bar U)}+\|v\|_{C^{k,r}(\bar U)}.$$

Step 1 证毕!

Step 2: $(C^{k,r}(\bar U),\|\cdot\|_{C^{k,r}(\bar U)})$ Banach.

设 $\{u_n\}$ 为 $C^{k,r}(\bar U)$ 中的柯西列. 则 ~~$\|u_n-u_m\|_{C(\bar U)}$~~ $\sum_{|\alpha|\le k}\|D^\alpha u_n-D^\alpha u_m\|_{C(\bar U)}\to 0$

~~由 $C^k(\bar U)$ 完~~ $\sum_{|\alpha|=k}[D^\alpha u_n-D^\alpha u_m]_{C^{0,r}(\bar U)}\to 0$

特别地. $\sup_{|\alpha|\le k}\sup_{x\in\bar U}|D^\alpha(u_n-u_m)(x)|\to 0$ as $m,n\to\infty$

$\|$

$\|u_n-u_m\|_{C^k(\bar U)}$

由 $(C^k(\bar U),\|\cdot\|_{C^k(\bar U)})$ Banach 知. $\exists u\in C^k(\bar U)$. $u_n\to u$ in $C^k(\bar U)$.

下面先证 $[D^\alpha u_n-D^\alpha u]_{C^{0,r}(\bar U)}\to 0$ as $n\to\infty$

上式 $=\sup_{\substack{x\ne y\\x,y\in\bar U}}\dfrac{|D^\alpha u_n(x)-D^\alpha u(x)-(D^\alpha u_n(y)-D^\alpha u(y))|}{|x-y|^r}$

这两步应该调换一下顺序，先证明u在$C^{k,r}$里面，再证明收敛性

$\to 0$ as $n\to\infty$ (因 $D^\alpha u_n$ 一致收敛于 $D^\alpha u$)

于是, 只欠证 $u\in C^{k,r}(\bar U)$, 这只需要 $\forall|\alpha|=k$, $[D^\alpha u]_{C^{0,r}(\bar U)}<+\infty$

事实上 $\forall x,y\in\bar U$. $x\ne y$. $\dfrac{|D^\alpha u(x)-D^\alpha u(y)|}{|x-y|^r}\le\limsup_{n\to\infty}\dfrac{|D^\alpha u_n(x)-D^\alpha u_n(y)|}{|x-y|^r}$

$\le\limsup_{n\to\infty}[D^\alpha u_n]_{C^{0,r}(\bar U)}<+\infty$ (柯西列必有界) $\square$

[5.2] $0<\beta<\gamma\le 1$ 时，证明：

$$\|u\|_{C^{0,\gamma}(\bar U)} \le \|u\|^{1-\gamma/1-\beta}_{C^{0,\beta}(\bar U)} \|u\|^{\frac{\gamma-\beta}{1-\beta}}_{C^{0,1}(\bar U)}.$$

证明：
$$\|u\|_{C^{0,\gamma}(\bar U)} = \|u\|_{C(\bar U)} + \sup_{\substack{x\neq y\\ x,y\in\bar U}} \frac{|u(x)-u(y)|}{|x-y|^{\gamma}}$$

$$\le \|u\|^{\frac{1-\gamma}{1-\beta}}_{C(\bar U)} \|u\|^{\frac{\gamma-\beta}{1-\beta}}_{C(\bar U)} + \sup_{\substack{x\neq y\\ x,y\in\bar U}} \frac{|u(x)-u(y)|^{\frac{1-\gamma}{1-\beta}}}{|x-y|^{\beta\cdot\frac{1-\gamma}{1-\beta}}} \sup_{\substack{x\neq y\\ x,y\in\bar U}} \frac{|u(x)-u(y)|^{\frac{\gamma-\beta}{1-\beta}}}{|x-y|^{1\cdot\frac{\gamma-\beta}{1-\beta}}}$$

离散Hölder

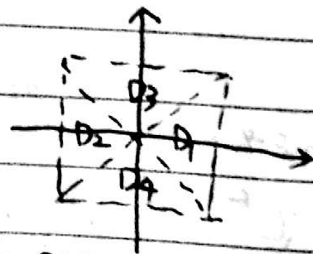
$$\le \left(\|u\|_{C(\bar U)} + \sup_{\substack{x\neq y\\ x,y\in\bar U}} \frac{|u(x)-u(y)|}{|x-y|^{\beta}}\right)^{\frac{1-\gamma}{1-\beta}} \cdot \left(\|u\|_{C(\bar U)} + \sup_{x\neq y} \frac{|u(x)-u(y)|}{|x-y|}\right)^{\frac{\gamma-\beta}{1-\beta}}$$

$$= \|u\|^{1-\gamma/1-\beta}_{C^{0,\beta}(\bar U)} \|u\|^{\gamma-\beta/1-\beta}_{C^{0,1}(\bar U)}.$$

$\square$

[5.3] $U=(-1,1)\times(-1,1)\subset\mathbb{R}^2$

令
$$u(x)=\begin{cases} 1-x_1 & x_1>0 \quad |x_2|<x_1 \quad \to D_1\\ 1+x_1 & x_1<0 \quad |x_2|<-x_1 \quad \to D_2\\ 1-x_2 & x_2>0 \quad |x_1|<x_2 \quad \to D_3\\ 1+x_2 & x_2<0 \quad |x_1|<-x_2 \quad \to D_4\end{cases}$$



问哪些 $p\in[1,+\infty]$，使 $u\in W^{1,p}(U)$.

证明：$u\in L^p(U)$ 为显见 $\forall 1\le p\le+\infty$，下面先求 u 的弱导数

Claim:
$$V = \begin{cases} (-1,0) & \text{in } D_1\\ (1,0) & \text{in } D_2\\ (0,-1) & \text{in } D_3\\ (0,1) & \text{in } D_4.\end{cases}$$
是 u 的一阶弱导数 Du

Check：$\forall\varphi\in C_c^\infty(U)$.

$$\int_U V\cdot\varphi = \sum_{i=1}^4\int_{D_i} V_i\varphi \underset{\text{分部}}{\overset{\cancel{V\in L^p}}{\underset{\varphi\in C_c^\infty}{=\!=}}} \int_{D_1}(-1,0)\varphi + \int_{D_2}(1,0)\varphi + \int_{D_3}(0,-1)\varphi + \int_{D_4}(0,1)\varphi$$

$$= \sum_{i=1}^4 \int_{D_i} \underbrace{\nabla u}_{\text{强导数}}\varphi \underset{\text{分部积分}}{=\!=} \sum_{i=1}^4 -\int_{D_i} u\nabla\varphi + \underbrace{\int_{\partial D_i} u\varphi n_i}_{0}$$

(∂D_i 在 U 内部抵消，$\varphi|_{\partial U}=0$

$= -\int_U u\cdot\nabla\varphi\, dx$ · 从而 v 的确是 u 的一阶弱导数.

$v\in L^p$ $\forall 1\le p\le+\infty$ 知 $u\in W^{1,p}(\bar{U})$ $\forall 1\le p\le+\infty$

□.

[5.4]. 设 $n=1$. $u\in W^{1,p}(0,1)$. $1\le p<+\infty$

(1) 证明 u a.e. 等于一个绝对连续函数 $u^*\in L^p(0,1)$.

(2) $1<p<\infty$ 时. $|u(x)-u(y)|\le|x-y|^{1-\frac{1}{p}}\left(\int_0^1|u'|^p dt\right)^{\frac{1}{p}}$

证明(1)

Lemma(周民强解题指南 P256) 设 $f\in L^1[a,b]$, $\forall\varphi\in C_c^1[a,b]$, 若有 $\int_a^b f(x)\varphi(x)=0$

则 $f(x)=c$. a.e

Proof: 设 g 是任一紧支于 (a,b) 的连续函数.

h 是 - - - - - - - - - - . $\int_a^b h(x)dx=1$.

令 $\varphi(x)=\int_a^x g(t)dt-\int_a^x h(t)dt\cdot\int_a^b g(t)dt.$ $x\in[a,b]$

则 $\varphi\in C_c^1(a,b)$.

$\varphi'(x)=g(x)-h(x)\int_a^b g(t)dt.$ $\forall x\in[a,b]$

从而 $0=\int f(x)\varphi'(x)dx$

$=\int_a^b f(x)\left(g(x)-\int_a^b g(t)dt\cdot h(x)\right)dx$

$=\int_a^b f(x)g(x)-\int_a^b f(x)h(x)dx\cdot\int_a^b g(x)dx=\int_a^b\left(f(x)-\int_a^b f(t)h(t)dt\right)g(x)dx$

于是: $f(x)-\int_a^b f(t)h(t)dt=0$ a.e. $\Rightarrow f(x)=c$ a.e.

注: 这用到了 $f\in L^1(\mathbb{R}^d)$ 若 $\forall\varphi\in C_c(a,b)$. $\int f\varphi=0$ 则 $f=0$ a.e.

该命题可由反证法得出: 否则设 $m(E)>0$, $f(x)>0$ in E. E有界

则 $\exists$ 紧支连续函数 $\{\varphi_k\}$. $\begin{cases}\|\varphi_k-\chi_E\|_{L^1}\to 0\\ |\varphi_k|\le 1\quad \varphi_k\to\chi_E \text{ a.e. in } E.\end{cases}$

由 $|f\varphi|\le|f|$ $\forall x\in E$

$\therefore 0<\int_E f(x)dx=\int_{\mathbb{R}^d}f(x)\chi_E(x)dx\overset{DCT}{=}\lim_{k\to\infty}\int_{\mathbb{R}^d}f(x)\varphi_k(x)dx=0.$ 矛盾

引理证毕. #.

回到原题. 令 $u^*=\int_0^x u'(t)dt$, 其中 u' 为 u 的弱导数.

则 u^* 绝对连续. 下证 $u=u^*+\text{const}$ a.e.

$\forall \varphi \in C_c^\infty(0,1)$，则 $\varphi \in C_c^1(0,1)$.

$$\int_0^1 (u^* - u)\varphi' dx = \int_0^1 \int_0^x u' dt \cdot \varphi' dx - \int_0^1 u \varphi' dx$$

$$= \int_0^1 \int_0^t \varphi'(x) dx \cdot u'(t) dt + \int_0^1 u' \varphi(x) dx$$

$$= \int_0^1 (\underbrace{\varphi(1)}_{0} - \varphi(t))\, u'(t) dt + \int_0^1 u'(x)\varphi(x) dx$$

$$= 0$$

再由引理即得.

(2). 由 u a.e.=绝对连续函数知

$$|u(x) - u(y)| = \left| \int_0^1 \chi_{\{x \le t \le y\}}(t)\, u'(t)\, dt \right|$$

a.e. $x, y \in [0,1]$ 不妨 $x \le y$

$$\le |x-y|^{\frac{1}{p'}} \left(\int_x^y |u'|^p dt \right)^{\frac{1}{p}} \qquad \frac{1}{p} + \frac{1}{p'} = 1$$

Hölder.

5. U 有界. U, V 开. $V \subset\subset U$ 证明: $\exists\, \zeta \in C^\infty(U)$. s.t. $\zeta \begin{cases} \equiv 1 & \text{on } V \\ = 0 & \text{near } \partial U \end{cases}$

证明: 取开集 W. $V \subset\subset W \subset\subset U$

令 $\zeta(x) = (\chi_W * \eta_\varepsilon)(x)$ $\quad |\varepsilon| < \frac{1}{2}\min\{dist(\partial V, \partial W), dist(\partial W, \partial U)\}$

则在 V 上. $\zeta(x) = \int_{\mathbb{R}^n} \chi_W(y)\, \eta_\varepsilon(x-y)\, dy$

$$= \int_{B(0,\varepsilon)} \eta_\varepsilon(y) \cdot \chi_W(x-y)\, dy.$$

$x \in V$ 时. $\forall y \in B(0,\varepsilon)$ $\quad |x-y| \le |x| + |y| \le |x| + \frac{1}{2} dist(\partial V, \partial W)$

$\Rightarrow x - y \in W \Rightarrow \chi_W(x-y) = 1$

$\Rightarrow \zeta(x) = 1 \quad \forall x \in V$

同理 令 $U_\varepsilon = \{x \in U \mid dist(x, \partial U) < \frac{\varepsilon}{3}\}$

可证, 有 $\zeta(x) = 0$ in U_ε. $\Rightarrow \zeta = 0$ near ∂U

$\zeta \in C^\infty$ 由 mollifier 性质易得

[5.6]. U 有界. $\{V_i\}_1^N$ 是 $\mathbb{R}^n$ 中的开集. $U \subset\subset \bigcup_{i=1}^{n} V_i$. 证明: 存在 C^∞ 函数 $\{\zeta_i\}_1^N$

s.t. $\begin{cases} 0 \le \zeta_i \le 1 \\ \operatorname{Spt}\zeta_i \subset V_i \quad 1 \le i \le N \\ \sum_{i=1}^{N} \zeta_i = 1 \quad \text{in } U. \end{cases}$

证明: 对 $\bar{U} \subset \bigcup_{i=1}^{n} V_i$.

~~对每个 V_i, 由[5.5]知 存在 C^∞ 函数 η_i $(1 \le i \le N)$ s.t.~~ ~~$\begin{cases} 0 \le \eta_i \le 1 \\ \operatorname{Spt}\eta_i \subseteq V_i \\ \sum_{i=1}^{N}\eta_i(x) = 1 \end{cases}$~~

$\forall x \in \bar{U}$, 存在以 x 为中心的闭球 $B(x) \subseteq V_i$. (for some i) ~~$\forall x \in \bar{U}$~~

因 $\bar{U}$ 紧 $\bar{U} \subseteq \bigcup_{x \in \bar{U}} \mathring{B}(x)$. 故存在有限子覆盖 $\bigcup_{j=1}^{m} B(x_j)$.

对任何 $i \in \{1, 2, \dots, N\}$. 令 $U_i = \bigcup_{\{j : \mathring{B}(x_j) \subseteq O_i\}} \mathring{B}(x_j)$ 则 $\bar{U} \subset \bigcup_{i=1}^{N} U_i$

由上一题, $\exists \varphi_i \in C^\infty$, $0 \le \varphi_i \le 1$ $\varphi_i = 1$ in $\bar{U}$

$\operatorname{Spt}\varphi_i \subseteq V_i$

令 $\eta_1 = \varphi_1$, $\eta_2 = \varphi_2(1-\varphi_1)$, $\dots$, $\eta_N = \varphi_N(1-\varphi_1)\cdots(1-\varphi_N)$.

则 $\operatorname{Spt}\eta_i \subset V_i$.

$\eta_1 + \cdots + \eta_N = 1 - \prod_{i=1}^{N}(1-\varphi_i)$. 因 $\forall x \in \bar{U}$, 总有一个 φ_i 是 1. 故 $\eta_1 + \cdots + \eta_N = 1$

[5.17]（链式法则）$F:\mathbb{R}\to\mathbb{R}$ 是 C^1 的，且 F' 有界 $u\in W^{1,p}(U)$，

$1\le p\le\infty$.

证明：(1) 若 ~~U有界~~ $\mathcal{L}^n(U)<\infty$，则 $v:=F(u)\in W^{1,p}(U)$，$\partial_i v=F'(u)\partial_i u$，$1\le i\le n$

(2) 若 $\mathcal{L}^n(U)=+\infty$，但 $F(0)=0$ 则 (1) 结论也对

Rmk：证明过程中会体现，(2) 中 $F(0)=0$ 是必须的.

Proof：由 $|F(u)-F(0)|\le\|F'\|_{L^\infty}|u|\in L^p$ （中值定理 余项）.

故 $F(u)-F(0)\in L^p(U)$

若 $\mathcal{L}^n(U)<\infty$ 则 $F(0)\in L^p(U)\Rightarrow F(u)\in L^p(U)$.

若 $\mathcal{L}^n(U)=+\infty$，则 $F(0)=0 \Leftrightarrow F(u)\in L^p(U)$.

$F(u)-F(0)\in L^p(U)$

~~从而~~ $F'(u)\partial_i u\in L^p(U)$ 是显然，因 $F'\in L^\infty(U)$，$\partial_i u\in L^p(U)$.

下面证明 $\partial_i F(u)=F'(u)\partial_i u$　$i=1,2,\dots,n$.

~~令 $V\subset\subset U$. $u^\varepsilon=\eta_\varepsilon * u$ 使得 $u^\varepsilon\in C^\infty(V_\varepsilon)$~~

$\forall\phi\in C_c^\infty(U)$ 设 $\mathrm{Spt}\,\phi\subset V\subset\subset U$. $u^\varepsilon=\eta_\varepsilon * u$.

要证：$\int_U F(u)\partial_i\phi\,dx=-\int_U F'(u)\partial_i u\cdot\phi\,dx$.

左 $=\int_V F(u)\partial_i\phi\,dx \overset{①}{=} \lim\limits_{\varepsilon\to0^+}\int_V F(u^\varepsilon)\partial_i\phi\,dx$.

$\underset{\substack{因 u^\varepsilon\in C^\infty(U_\varepsilon)\\ 链式法则可用}}{\overset{分部积分}{=}} -\lim\limits_{\varepsilon\to0^+}\int_V F'(u^\varepsilon)\partial_i u^\varepsilon\cdot\phi\,dx$　充分 (设ε足够小).

$\overset{②}{=} -\int_V F'(u)\partial_i u\cdot\phi\,dx=-\int_U F'(u)\partial_i u\cdot\phi\,dx$

check ①: $\int_V |F(u)-F(u^\varepsilon)|\cdot|\partial_i\phi|\,dx\le\int_V|u-u^\varepsilon|\cdot|\partial_i\phi|\,dx\cdot\|F'\|_{L^\infty}$

$\le\|F'\|_{L^\infty(U)}\|u-u^\varepsilon\|_{L^p(V)}\|\partial_i\phi\|_{L^{p'}(U)}$

$\to0$ as $\varepsilon\to0^+$ (因 $u^\varepsilon\to u$ in $L^p_{loc}(U)$)

②: $\left|\int_V F'(u)\partial_i u\,\phi\,dx-\int_V F'(u^\varepsilon)\partial_i u^\varepsilon\cdot\phi\,dx\right|$

$\le\underbrace{\int_V|F'(u)-F'(u^\varepsilon)||\partial_i u||\phi|\,dx}_{A}+\underbrace{\int_V|F'(u^\varepsilon)|\cdot|\partial_i u-\partial_i u^\varepsilon|\cdot|\phi|\,dx}_{B}$.

对 $B = \int_V |F'(u^\varepsilon)| \cdot |\partial_i u - \partial_i u^\varepsilon| \cdot |\phi| \, dx$

$\leq \|F'\|_{L^\infty(U)} \cdot \|\partial_i u - \partial_i u^\varepsilon\|_{L^p(V)} \cdot \|\phi\|_{L^{p'}(V)}$.

$\longrightarrow 0$ as $\varepsilon \to 0^+$ (因 $u^\varepsilon \longrightarrow u$ in $W^{1,p}_{loc}$)

$A = \int_V |F'(u) - F'(u^\varepsilon)| \cdot |\partial_i u| \cdot |\phi| \, dx$

由 $u^\varepsilon \longrightarrow u$ a.e. in V (光滑化性质).

F' 连续 $\Rightarrow F'(u) \to F'(u^\varepsilon)$ a.e. in V

又: $|F'(u) - F'(u^\varepsilon)| \cdot |\partial_i u| \cdot |\phi| \leq 2\|F'\|_{L^\infty} |\partial_i u| \cdot |\phi| \in L^1$ (由 Hölder 即得

故由控制收敛定理. $A \longrightarrow 0$ as $\varepsilon \to 0^+$.

[5.18] $1 \leq p \leq \infty$. U 有界.

(1) 证明: 若 $u \in W^{1,p}(U)$. 则 $|u| \in W^{1,p}(U)$.

(2) 若 $u \in W^{1,p}(U)$. 则 $u^+, u^- \in W^{1,p}(U)$.

$Du^+ = \begin{cases} Du & \mathcal{L}^n\text{-a.e. on } \{u>0\} \\ 0 & \mathcal{L}^n\text{-a.e. on } \{u \leq 0\} \end{cases}$ $\quad Du^- = \begin{cases} 0 & \mathcal{L}^n\text{-a.e. on } \{u \geq 0\} \\ -Du & \mathcal{L}^n\text{-a.e. on } \{u < 0\} \end{cases}$

(3). $u \in W^{1,p}(U)$. 则 $Du = 0$ a.e. on $\{u = 0\}$

Proof: 只用证(2). (2) $\Rightarrow$ (1) 显然

若(2)对, 则 $Du = Du^+ - Du^- = 0$ on $\{u=0\}$ $\mathcal{L}^n$-a.e.

下证(2). 令 $F_\varepsilon(r) = (\sqrt{r^2+\varepsilon^2} - \varepsilon) \chi_{\{r \geq 0\}} \in C^1(\mathbb{R})$

且 $F_\varepsilon'(r) \in L^\infty(\mathbb{R})$. (Fix $\varepsilon > 0$).

由门题 $\int_U F_\varepsilon(u) \partial_i \phi \, dx = -\int_U F_\varepsilon'(u) \partial_i u \cdot \phi \, dx$ ......(*)

注意到. $u^+ = \lim_{\varepsilon \to 0^+} F_\varepsilon(u)$.

(*) 左边令 $\varepsilon \to 0$. 极限为 $\int_U \lim_{\varepsilon\to 0^+} F_\varepsilon(u) \, \partial_i \phi \, dx = \int_U u^+ \partial_i \phi \, dx$

这由控制收敛即得. (*) 右边同理 $\longrightarrow -\int \partial_i u \, \chi_{\{u>0\}} \phi \, dx$

故 $\partial_i u^+ = \partial u \, \chi_{\{u>0\}}$ a.e. ~~in {u>0}~~ 同理 u^- 有类似结果，因 $u^- = (-u)^+$
